

Pre-feasibility Study

MANUFACTURING OF MOTORCYCLE SAFETY HELMETS

April 2021

The figures and financial projections are approximate due to fluctuations in exchange rates, energy costs, and fuel prices etc. Users are advised to focus on understanding essential elements such as production processes and capacities, space, machinery, human resources, and raw material etc. requirements. Project investment, operating costs, andrevenues can change daily. For accurate financial calculations, utilize financial calculators on SMEDA's website and consult financial experts to stay current with market conditions.

2. EXECUTIVE SUMMARY

Motorcycle is an important and the most common mean of transportation in Pakistan. Motorcycles contribute more than 50% in country's registered vehicles. Rapid growth in the use of motorcycle in Pakistan has been accompanied by increase in injuries and fatalities due to road accidents. As per available statistics, wearing a standard, good quality motorcycle safety helmet can reduce the risk of fatal injury by approximately 40% and risk of serious injury by up to 70%. Increase in production and sale of motorcycles, road safety awareness campaigns and mandatory requirement of law to wear a safety helmet, while riding a motorcycle, have generated a high demand for motorcycle safety helmets in Pakistan in recent years.

This "Pre-feasibility Document" provides details for setting up a unit for the "Manufacturing of Motorcycle Safety Helmets", which has a capacity of manufacturing 112,000 units in a year at a maximum capacity of 100%. The initial starting capacity in "Year One" is calculated at 60%, with 67,200 production units annually.

The unit is proposed to be ideally located in any industrial areas in the metropolitan cities like Lahore, Karachi, Faisalabad or Peshawar. These areas are preferred for the proposed unit due to their closeness to the market, and availability of skilled labor.

A small size manufacturing unit will be set up in a rented building with area of 2,250 square feet. The project requires a total investment of PKR 10.774 million. This includes capital investment of PKR 7.377 million and working capital of PKR 3.396 million. It is proposed that the project shall be financed through 100% equity. The Net Present Value (NPV) of project is PKR 31.66 million with an Internal Rate of Return (IRR) of 59% and a Payback period of 2.33 years. Further, this project is expected to generate Gross Annual Revenues of PKR 47.04 million during 1st year, Gross Profit (GP) ratio ranging from 25% to 29% and Net Profit (NP) ratio ranging from 8% to 14% during the projection period of ten years. The proposed project will achieve its estimated breakeven point at capacity of 30% (33,600 units) with annual revenue of PKR 23.47 million.

The proposed project will provide employment opportunities to 25 people including the owner. High return on investment and steady growth of business is expected with the entrepreneur having some prior experience or education in the related field of business. The legal business status of this project is proposed as "Sole Proprietorship". Further, the proposed project may also be established as a "Partnership Concern".

3. INTRODUCTION TO SMEDA

The Small and Medium Enterprises Development Authority (SMEDA) was established in October 1998 with an objective to provide fresh impetus to the economy through development of Small and Medium Enterprises (SMEs).

With a mission "to assist in employment generation and value addition to the national income, through development of the SME sector, by helping increase the number, scale and competitiveness of SMEs", SMEDA has carried out 'sectoral research' to identify policy, access to finance, business development services, strategic initiatives and institutional collaboration and networking initiatives. Preparation and dissemination of prefeasibility studies in key areas of investment has been a successful hallmark of SME facilitation by SMEDA.

Concurrent to the prefeasibility studies, a broad spectrum of business development services is also offered to the SMEs by SMEDA. These services include identification of experts and consultants and delivery of need-based capacity building programs of different types in addition to business guidance through help desk services.

National Business Development Program for SMEs (NBDP) is a project of SMEDA, funded through Public Sector Development Program of Government of Pakistan.

The NBDP envisages provision of handholding support / business development services to SMEs to promote business startup, improvement of efficiencies in existing SME value chains to make them globally competitive and provide conducive business environment through evidence-based policy-assistance to the Government of Pakistan. The Project is objectively designed to support SMEDA's capacity of providing an effective handholding to SMEs. The proposed program is aimed at facilitating around 314,000 SME beneficiaries over a period of five years.

4. PURPOSE OF THE DOCUMENT

The objective of the pre-feasibility study is primarily to facilitate potential entrepreneurs in project identification for investment. The project pre-feasibility may form the basis of an important investment decision and in order to serve this objective, the document/study covers various aspects of project concept development, start-up, and production, marketing, finance and business management.

The purpose of this document is to provide information to the potential investors about "Manufacturing of Motorcycle Safety Helmets". The document provides a general understanding of the business to facilitate potential investors in crucial and effective investment decisions.

The need to come up with pre-feasibility reports for undocumented or minimally documented sectors attains greater imminence as the research that precedes such reports reveal certain thumb rules; best practices developed by existing enterprises by trial and error, and certain industrial norms that become a guiding source regarding various aspects of business set-up and its successful management.

Apart from carefully studying the whole document one must consider critical aspects provided later on, which form the basis of any investment decision.

5. BRIEF DESCRIPTION OF PROJECT & PRODUCTS

Motorcycle helmet makes motorcycle riding safe by protecting the rider's head in the event of an accident. The helmet reduces the risk of head injury, the major cause of death in such accidents. In recent years, wearing a helmet has been made mandatory by law in many countries, including Pakistan.

Motorcycle helmet consists of a polystyrene foam inner shell that absorbs the shock of an impact, and a protective plastic outer layer. Several design variations exist, with two major classifications; the helmet that covers the chin area and the helmet that does not. Some helmets provide additional conveniences such as, ventilation, face shields, sun visors, ear protection, etc.

There are five basic types of helmets in which some are intended for motorcycling and some are not. Those helmets which are not intended for motorcycling are also used by some riders. All types of helmets are secured by a chin strap. The protection provided by a helmet reduces by not fastening the chin strap.

From most to least protective, as generally accepted by riders and manufacturers, the helmet types are: Full face, Off-road (motocross), Modular (flip-flop), Open face (3/4 helmet) and Half helmet. Types of helmets are shown in Figure 1.

Figure 1: Types of Helmets

Currently in Pakistan, it is mandatory by law¹, for the driver, to wear helmets made of prescribed material², while riding a motorcycle. In many countries, it is mandatory for both, the driver and the person sitting at the pillion seat (a secondary pad, cushion or seat behind the main seat on a motorcycle, bicycle or moped). to wear helmets while driving motorcycle. The number of motorcycles in Pakistan is rapidly increasing, in the year 2019/2020 alone, despite outbreak of pandemic, the total number of motorcycles produced³ were 1,370,417 and the total number of sales were 1,370,005. This shows the rapidly increasing demand for motorcycle helmets in the local market.

The production versus sale trend of motorcycles provides an attractive opportunity for setting up a unit for manufacturing of motorcycle safety helmets, which is expected to offer a good sale potential in Pakistan.

In this study, the manufacturing of full-face plastic helmets has been suggested. A fullface helmet covers the entire head, with a rear that covers the base of the skull, and a protective section over the front of the chin. Such helmets have an open cutout in a band across the eyes and nose, and often include a clear or tinted transparent plastic face shield, known as a visor, that generally swivels up and down to allow access to the face, vents to increase the airflow to the rider and a retention system with the chin strap's ability to stay fastened without stretching or breaking.

Labeled full-face helmet is shown in Figure 2.

Figure 2: Labeled full-face helmet

² Currently, the law in Pakistan does not prescribe a standard for motorcycle helmets or a requirement for motorcycle helmets to meet an international safety standard.

¹ PMVO 1969, 89-A, mandates that: "Rider to wear helmet. - No person shall drive, or ride the pillion seat of, a two-wheeled motor vehicle except when he is wearing a crash helmet. Explanation- In this section, "crash helmet" means a helmet made of such material and meeting such other requirements as may be prescribed".

³ http://www.pama.org.pk/statistical-information/historical-information/annual-sales-production

Full-face plastic helmets have been suggested due to the following reasons;

- According to our primary & secondary research, there is a high demand in the country for full face helmets as compared to other types of helmets.
- Full face helmet fulfills the basic requirements of the users in low cost.

For setting up the proposed manufacturing unit, major cities of Pakistan (i.e., Lahore, Karachi, Faisalabad, Hyderabad, and Peshawar) are more suitable locations.

A medium sized Motorcycle Safety Helmets Manufacturing Unit is proposed to be set up in a rented building to avoid the cost of land and building. The proposed project at maximum installed capacity (100%) shall manufacture 112,000 motorcycle helmets per year. However, during first year of operations, the project will attain capacity of 60% producing 67,200 units.

Total area required for the unit is 2,250 Sq. ft. which shall be rented. Estimated employment required for this project is 25 persons.

5.1. Production Process Flow

The production process flow of motorcycle safety helmet is shown in Figure 3.

Figure 3: Safety Helmet Production Process Flow

The brief description of process flow is as follows:

Procurement of Raw Material

The process of manufacturing of a motorcycle helmet starts with the procurement of raw materials, listed below:

• Acrylonitrile Butadiene Styrene (ABS)

It is a common thermoplastic polymer. ABS provides favorable mechanical properties such as impact resistance, toughness, and rigidity when compared with other common polymers. ABS is used as a raw material for skull manufacturing.

Polycarbonate (PC)

Polycarbonates (PC) are a group of thermoplastic polymers containing carbonate groups in their chemical structures. Polycarbonates used in engineering are strong, tough materials. Despite being strong, they can be easily worked, molded, and thermoformed. Polycarbonate is used as a raw material for visor manufacturing.

Synthetic Rubber

A synthetic rubber is any artificial elastomer. They are polymers synthesized from petroleum byproducts. Synthetic rubber, just like natural rubber, has many uses in the automotive industry. Solid rubber strips are used upon of helmets to make it comfortable.

• Expanded Polystyrene Foams (EPS)

EPS is a rigid, closed cell, thermoplastic foam material. It is produced from solid beads of polystyrene. Expansion is achieved by virtue of small amounts of gas contained within the polystyrene bead. The gas expands when heat in the form of steam is applied, thus forming closed cells of EPS. EPS is made of 98% air, making it one of the lightest insulating materials. It is used in the internal padding of the helmet.

Polyester Fabric

Polyester is a synthetic fabric that's usually derived from petroleum. This fabric is one of the world's most popular textiles, and it is used in thousands of different consumer and industrial applications. In the process of helmet manufacturing, this fabric is used for the inner clothing.

Nylon/Polypropylene

Polypropylene, also known as polypropene, is a thermoplastic polymer used in a wide variety of applications. Common extrusion methods include production of melt-blown and spun-bond fibers to form long rolls for future conversion into a wide range of useful products. In the process of helmet manufacturing, this material is used to make chin straps.

Paints and Lacquer

Solid paint is used in helmet manufacturing industry The paint is formed by topping a single layer of color with a clear-coat layer, designed to protect the helmet against small damage such as light scratches and paint chips. Lacquer is a special liquid, painted on the visor as a transparent coating to protect it and give it shine.

Skull Manufacturing

As a first step of manufacturing a helmet, Acrylonitrile Butadiene Styrene (ABS) beads is added in a tank, where the raw material is melted. ABS is melted and injected into a mold cavity, where it cools and hardens to the configuration of the cavity. Once the skull is sufficiently cool, the mold opens and the skull is ejected.

Painting

After the skull manufacturing process, the skull is cleaned of tiny materials and dust which might affect the overall result of the painting process. The tiniest dust particle is completely absorbed by applying industrial alcohol and vacuum machines before the helmet proceeds to a hermetically sealed painting booth. Depending on the predecided color and design options, the colors and mix by an expert and using a painting gun, the surface is painted with a base coat that is followed by another layer of the primary color.

EPS and Polyester Fabric Padding

One of the important parts in a helmet is the EPS shell. EPS comprises of tiny little beads of polystyrene which are expanded under pressure and heated to create what is commonly known in the industry as 'foam'. In technical terms, the polystyrene now becomes expanded polystyrene (EPS). This forms the internal shell of a motorcycle helmet, but this shell alone does not have the mechanical resistance to withstand high-impact forces which is why it is covered with a shell made of ABS. Both the shells are attached together using industrial adhesive into one combined external structure.

Polyester Fabric are cut and stitched by sewing machines according to the shape of the skull. This forms the internal skull padding and cheeks padding of a helmet.

Chin Straps Preparation

Nylon / Polypropylene is used to form the chin straps. In a separate part of the manufacturing unit, workers design the straps and strapping mechanism along with other rivets and bushes that go into the helmet for securing the strap in place. Workers in the assembly line merge the painted shell with the strapping mechanism using multiple specialized tools for punching holes and attaching the straps security.

Visor Manufacturing

In the final step of manufacturing parts of the safety helmets, Polycarbonate goes in the other injection molding machine and visor is shaped out from the barrel of the machine. It is then manually checked to ensure the consistency.

Lacquer Painting

Lacquer is coated on visor by dipping it in that liquid. Lacquer is coated to protect it from scratches. It is then dried in a heating machine so that the coating sticks to the visor and excess is removed.

<u>Assembling</u>

After all the parts are manufactured and prepared, assembling process is performed. Polyester Fabric is manually attached on the EPS/Styrofoam using tapes. The entire padding is manually placed and attached inside the skull. Visor is attached to the helmet as the last operation, manually or through bolt injection machine (as the bolts are fixed inside the helmet).

<u>Finishing</u>

Pads and inner lining of the helmet are precisely cut with an accuracy of a few millimeters which ensure that the wearer gets the best comfort and safety while using the product.

Quality Check

Each of the steps mentioned above passes through stringent quality checks to ensure that all the manufactured parts meet the set quality parameters. The parts not meeting the required quality parameters are removed and recycled to reduce waste. The helmets meeting the quality standards are marked with the insignia of the company.

Packing and Shipping

The finished helmets are packaged and shipped to market, along with a user manual to help the customer make the best use of the product.

5.2. Installed and Operational Capacities

The proposed manufacturing unit shall, at maximum capacity of 100%, will produce 112,000 units of motorcycle helmets annually. It is projected that, during the period of 10 years, the facility shall continue to operate with 10% annual increase in capacity each year.

The unit would operate for 8 hours per day, working in one shift per day for 280 working days in a year. Based on the calculations, the unit will attain a capacity of 60% during the initial year of operations.

Table 1 depicts the installed and operational capacities of the proposed unit for the initial year.

| Product | Time Consumpti on Per Helmet (Seconds) | Produ ction Per minute | Injection Molding Machine Capacity Per Day (A) | Annual Working Days (B) | Annual Producti on C=(A*B) | Annual Capacit y @ 60 % |
|------------------------|--|---------------------------------|---|-------------------------------|-------------------------------------|----------------------------------|
| Safety Helmet-Skull | 72 | 50 | 400 (50*8) | 280 | 112,000 | 67,200 |

Table 1: Installed and Operational Capacity

| | | (60*60/ 72) | | | | |
|------------------------|----|-----------------------|----------------|-----|---------|---------|
| Safety Helmet-Visor | 30 | 120 (60*60/ 30) | 960 (120*8) | 280 | 268,800 | 161,280 |

6. CRITICAL FACTORS

The following factors may be taken into account while making investment decision:

- Technical know-how and basic knowledge of the entrepreneur
- Production of a quality product, specific to user need and satisfaction
- Availability of specialized workforce
- Strict checks on quality standards
- Up-to-date knowledge of market needs and new technology
- Selection of appropriate machinery, technology and human resources
- Rigorous supervision of the production process at every level
- Ability to generate work orders through industrial networking (B2B and B2C)
- Quality products and customer satisfaction
- Attractive labeling and packaging

7. GEOGRAPHICAL POTENTIAL FOR INVESTMENT

For the success of this manufacturing unit, it is necessary to determine the target market of the product. In recent years the demand of motorcycles has increased in all across the country. However, metropolitan cities like Lahore, Karachi, and Faisalabad, Peshawar carries greater potential for setting up this proposed unit.

Locating the unit in large developed cities would provide advantage of easy acquisition of quality raw material, proximity with buyers to generate consistent orders, followed by an increased demand.

8. POTENTIAL TARGET MARKETS

In Pakistan, motorcycle helmets were used by the riders as an option. However, in recent years, its use has increased because it has been made mandatory under the Law. The manufacturing unit will produce motorcycle safety helmets and sell through wholesale dealers in the market.

Pakistani motorcycle industry accelerated and scored the best ever sales. According to government of Pakistan statistics motorcycle industry's March sales were close to

500,000 units, which are 27.7% higher from 2020 and 14.5% higher from the 2019, which is expected to 1,500,000 units in 2025. Helmet market is associated with motor cycle market; therefore, helmet demand will increase. This increase in demand is met with import as well as induction of new manufacturers in the industry.

Increased sale of motorcycle and implementation of Law, can potentially support a shift towards more demand of helmets in coming years. Therefore, it can be inferred that it is timely to invest in the proposed project.

As per tests and study conducted by the Ministry of Science and Technology, millions of helmets both locally manufactured are not up to safety standards. Not only the helmets are poor in quality but in most of the accidental cases, they have proved to be dangerous for the wearers.

Currently in Pakistan helmet manufacturer industry operates as a cottage industry which has no reliable record about their numbers and production. These manufacturing units target local market. The locally manufactured helmets do not meet the quality standards for export.

9. PROJECT COST SUMMARY

A detailed financial model has been developed to analyze the commercial viability of the unit for manufacturing of motorcycle safety helmets. Various costs and revenue related assumptions along with results of the analysis are outlined in this section.

The projected Income Statement, Cost of Goods Sold, Cash Flow Statement and Balance Sheet are attached as Annexure.

9.1. Project Economics

All the figures in this financial model have been calculated after carefully taking into account the relevant assumptions and target market.

9.2. Project Cost

Total investment cost of the project has been calculated to be PKR. 10,774,595. The project will be financed through 100% Equity. Table 2 provides the detail of cost calculated for the proposed manufacturing unit.

| Description of Costs | Amount (PKR) |
|---------------------------|--------------|
| Building Renovation Costs | 470,500 |
| Machinery & Equipment | 4,345,000 |
| Furniture & Fixtures | 355,000 |
| Office Equipment | 678,000 |
| Office Vehicles | 80,800 |

| Pre-operating Costs | 1,245,886 |
|--------------------------------|------------|
| Advance Rent / Security | 202,500 |
| Total Capital Cost | 7,377,686 |
| Working Capital | |
| Equipment spare part inventory | 36,208 |
| Raw material inventory | 2,293,200 |
| Upfront building rent | 67,500 |
| Cash | 1,000,000 |
| Total Working Capital | 3,396,908 |
| Total Project Cost | 10,774,595 |

9.2.1. Land

The Motorcycle Safety Helmet Manufacturing Unit will be started in a rented building with an area of 2,250 sq. ft. High land cost in urban areas and easy availability of suitable units on rent for setting up a business makes it economically rational to start a business in a rented space. Therefore, no land cost has been added to the project cost.

Breakup of the space requirement is provided in Table 3.

| Table 3. Bleakup of Space Requirement | | | | |
|---------------------------------------|------------------|----------------|--|--|
| | Area Description | Area (sq. ft.) | | |
| Covered Area | | | | |
| Admin Block | | 290 | | |
| Factory Area | | 1440 | | |
| Workshop | | 240 | | |
| Store | | 120 | | |
| Washroom | | 80 | | |
| Total Area | | 2,250 | | |

Table 3: Breakup of Space Requirement

9.2.2. Building

The safety helmets manufacturing unit will be set up in a rented building of 2,250 sq. ft. Industrial electricity connection having load up to 15-25 KW (B1) is required for proposed project. There will be no cost of building construction; however, building renovation and interior decoration cost is included in the capital investment. Building rent is included in the operating cost.

Table 4 provides details of building renovation and interior decoration cost.

| Cost Item | UOM | Total Liter / Area / Number | Unit Cost/ sq.ft. (PKR) | Total Cost (PKR) |
|-------------|-------|-----------------------------------|-------------------------------|---------------------|
| Paint Cost | Litre | 225 | 500 | 112,500 |
| Labour Cost | Feet | 22,500 | 8 | 180,000 |
| Wall Racks | Units | 10 | 15,000 | 150,000 |
| Curtains | Units | 4 | 5,000 | 20,000 |
| Blinds | Units | 4 | 2,000 | 8,000 |
| Total | | | | 470,500 |

Table 4: Building Renovation Cost

9.2.3. Machinery and Equipment Requirement

Table 5 provides details of machinery and equipment required for the project.

| Cost Item | Unit(s) | Unit Cost (PKR) | Total Cost (PKR) |
|-------------------------------------|---------|--------------------|---------------------|
| Injection Molding Machine- Skull | 1 | 2,500,000 | 2,500,000 |
| (Cycle time 32 Sec) (120 Ton Force) | | , , | , , |
| Injection Molding Machine- Visor | 1 | 1,000,000 | 1,000,000 |
| (Cycle time 72 Sec) (40 Ton Force) | | | |
| Sewing Machine (domestic) | 4 | 25,000 | 100,000 |
| Molds of Helmets | 4 | 100,000 | 400,000 |
| Molds of Visor | 4 | 50,000 | 200,000 |
| Plastic Drums | 5 | 3,000 | 15,000 |
| Hand Drill Machines | 4 | 15,000 | 60,000 |
| Mechanical Tool Kits | 2 | 20,000 | 40,000 |
| Electrical Tool Kits | 2 | 15,000 | 30,000 |
| Total Cost | | | 4,345,000 |

Table 5: Machinery and Equipment Requirement

Table 6 provides details of tool kits.

| Mechanical Tool Kit | Electrical Tool Kit |
|---|-----------------------------|
| Wrenches (Set) | Multi-meter |
| Screwdrivers | Voltage Tester |
| Pliers | Wire Strippers |
| Hammer | Circuit Finder |
| Multi-meter | Screw drivers & Nut drivers |
| Scissors | Pliers |
| Electrical Tape | Fish Tape |
| Hex Wrench(Set) | Tape Measure |
| LED Headlamp | Hammer |
| Mechanic Gloves (Disposable and Non- disposable) | Level |
| Wire Terminal Crimper | Torch |
| Wire Terminals (set) | Utility Knife |

9.2.4. Furniture & Fixtures Requirement

Table 7 provides details of the furniture and fixture requirement of the project.

| Cost Item | Units | Unit Cost | Total Cost |
|-------------------|-------|-----------|------------|
| | | (PKR) | (PKR) |
| Executive Table | 1 | 30,000 | 30,000 |
| Reception Counter | 1 | 50,000 | 50,000 |
| Executive Chairs | 1 | 20,000 | 20,000 |
| Office Chairs | 12 | 10,000 | 120,000 |
| Staff Table | 4 | 25,000 | 100,000 |
| Sofa Sets | 1 | 35,000 | 35,000 |
| Total Cost | | | 355,000 |

Table 7: Furniture and Fixtures Requirement

9.2.5. Office Equipment Requirement

Details of office equipment required for the project is provided in Table 8.

| Cost Item | Units | Unit Cost | Total Cost |
|--|-------|-----------|------------|
| | | (PKR) | (PKR) |
| Air Conditioners | 3 | 90,000 | 270,000 |
| Water Dispenser / Water Cooler | 2 | 20,000 | 40,000 |
| Laptop | 2 | 80,000 | 160,000 |
| Printer | 1 | 40,000 | 40,000 |
| Wi-Fi / Internet Connection with Router Cost | 1 | 5,000 | 5,000 |
| Ceiling Fan | 14 | 4,500 | 63,000 |
| Security Cameras (2MP) | 8 | 2,000 | 16,000 |
| Exhaust Fan | 10 | 2,000 | 20,000 |
| DVR | 1 | 12,000 | 12,000 |
| Bracket Fan | 3 | 4,000 | 12,000 |
| LED/LCD | 1 | 40,000 | 40,000 |
| Total Cost | | | 678,000 |

Table 8: Office Equipment Requirement

9.2.6. Office Vehicle Requirement

Details of office vehicle required for the project is provided in Table 9.

| Cost Item | Unit(s) | Unit Cost (PKR) | Registration fee @ 1% | Total Cost (PKR) |
|------------|---------|--------------------|-----------------------|---------------------|
| Motorcycle | 1 | 80,000 | 800 | 80,800 |
| Total Cost | | | | 80,800 |

Table 9: Office Vehicle Requirement

9.2.7. Pre-Operating Cost

Details of pre-operating cost for the project are provided in Table 10.

| Cost Item | Unit Cost/ Month (PKR) | Total Cost (PKR) |
|---------------------|---------------------------|------------------|
| Administration Cost | | 0 |
| Utilities exp. | | 940,886 |
| Total Cost | | 940,886 |

9.2.8. Security against Building Rent

Details of pre-operating cost for the project are provided in Table 11.

| Cost Item | Months | Unit Cos/Month (PKR) | Total Cost (PKR) |
|--------------------------------|--------|----------------------------|------------------------|
| Security against Building Rent | 3 | 67,500 | 202,500 |
| Total (PKR) | | | 202,500 |

Table 11: Security against Building Rent

9.3. Financial Feasibility Analysis

The financial feasibility analysis given in Table 12 provides the information regarding projected IRR, NPV and payback period of the study based on 100% equity.

| Description | Project |
|----------------------------|------------|
| IRR | 59% |
| NPV (PKR) | 31,656,837 |
| Payback Period (years) | 2.33 |
| Projection Years | 10 |
| Discount Rate used for NPV | 20% |

Table 12: Financial Feasibility Analysis

9.4. Financial Feasibility Debt Financing

The financial feasibility analysis given is shown in table. Table 13. provides the information regarding projected IRR, NPV and payback period of the study based on combination of equity (50%) and debt (50%) financing for the proposed project.

| Description | Project |
|----------------------------|------------|
| IRR | 59% |
| NPV (PKR) | 47,353,918 |
| Payback Period (years) | 2.33 |
| Projection Years | 10 |
| Discount Rate used for NPV | 14% |

T.L. 40 E'

9.5. Breakeven Analysis

Breakeven analysis is provided in Table 14.

| Particulars | Amount First Year (PKR) | Ratios | |
|--------------------|----------------------------|------------|--|
| Sales | 47,040,000 | 100% | |
| Variable Cost | 36,681,847 | 78% | |
| Contribution | 10,358,153 | 22% | |
| Fixed Cost | 5,338,587 | 11% | |
| Breakeven | | | |
| Breakeven Units | | 34,635 | |
| Breakeven Revenue | | 24,244,392 | |
| Breakeven Capacity | | 31% | |

Table 14: Breakeven Analysis

9.6. Revenue Generation

The proposed product ex-factory price is 700 per unit. Local manufacturers' offer price range 500-1000 per unit, whereas import price range is 1,000-1,800 per unit.

Based on the 60% capacity utilization of the unit, sales revenue during the first year of operations is estimated in Table 15.

 Table 15: Revenue Generation

| Product | Production / Year (Unit) | Capacity Utilization @ 60% | Price per Unit | Annual Revenue (PKR) |
|----------------|-----------------------------|----------------------------------|-------------------|----------------------------|
| Safety Helmets | 112,000 | 67,200 | 700 | 47,040,000 |

9.7. Variable Cost Estimate

Variable costs of the project have been provided in detail in Table 16.

Table 16: Variable Cost Estimate

| Description of Costs | Total Cost (PKR) |
|-----------------------|---------------------|
| Raw material Cost | 27,518,400 |
| Direct labor | 7,020,000 |
| Utilities | 717,197 |
| Machinery maintenance | 217,250 |

| Travelling expense | 246,000 |
|--|------------|
| Communications expense (phone, fax, mail, internet, etc.) | 369,000 |
| Office vehicles maintenance | 102,000 |
| Office expenses (stationery, entertainment, janitorial services, etc.) | 492,000 |
| Total Variable Cost (PKR) | 36,681,847 |

9.7.1. Raw Material Cost

Per unit cost of goods sold related to major components used in manufacturing and total cost of goods sold based on estimated annual sales of 67,200 units is provided in Table 17.

| Description of Costs | Price per KG | Consumption per unit (KG) | Per Unit Cost (PKR) |
|--|-----------------|---------------------------|------------------------|
| Acrylonitrile Butadiene Styrene (ABS) | 150 | 1 | 150 |
| Polycarbonate | 60 | 0.30 | 18 |
| Rubber | 210 | 0.20 | 42 |
| Expanded Polystyrene Foams (EPS) | 220 | 0.35 | 77 |
| Polyester Fabric | 415 | 0.10 | 41.5 |
| Nylon/Polypropylene | 170 | 0.10 | 17 |
| Paint and Lacquer | | | 50 |
| Packing and Assembling Cost | | | 14 |
| Total Per Unit Cost | | 2.05 | 409.5 |
| Total Cost (67,200 sold units) | | | 27,518,400 |

 Table 17: Raw material

9.7.2. Office Vehicle Maintenance

Office vehicle cost is provided in Table 18.

Table 18: Office Vehicle Maintenance

| Description of Costs | Amount (PKR) |
|----------------------|--------------|
| Fuel cost | 7,000 |
| Service charges | 500 |
| Oil & tuning | 1,000 |
| Monthly expense | 8,500 |
| Yearly expense | 102,000 |

9.8. Fixed Cost Estimate

Details of fixed cost for the project are provided in Table 19.

| Description of Costs | Amount (PKR) |
|---|--------------|
| Management Staff | 2,460,000 |
| Administration benefits expense | 94,800 |
| Building rental expense | 810,000 |
| Utilities | 223,690 |
| Professional fees (legal, audit, consultants, etc.) | 470,400 |
| Depreciation expense | 912,920 |
| Amortization of pre-operating costs | 249,177 |
| Promotional expense | 117,600 |
| Total Fixed Cost | 5,338,587 |

Table 19: Fixed Cost Estimate

9.9. Human Resource Requirement

For the 1st year of operations, the human resource requirements are projected in Table 20.

| Post | No.of Employees | Monthly Salary (PKR) | Annual Salary (PKR) |
|--|--------------------|-------------------------|---------------------------|
| Management Staff | | | |
| Owner | 1 | 100,000 | 1,200,000 |
| Admin & Finance Officer | 1 | 45,000 | 540,000 |
| Security Guard | 2 | 20,000 | 480,000 |
| Office Boy | 1 | 20,000 | 240,000 |
| Total Management Staff Salary | | | 2,460,000 |
| Direct Labor | | | |
| Visor Machine Operator | 1 | 45,000 | 540,000 |
| Visor Machine (unskilled labor) | 2 | 20,000 | 480,000 |
| Injection Molding Machine Operator | 1 | 45,000 | 540,000 |
| Injection Molding Machine (unskilled labor) | 2 | 20,000 | 480,000 |
| Tailor | 4 | 40,000 | 1,920,000 |
| Mechanical Foreman | 1 | 40,000 | 480,000 |
| Packing Labor | 4 | 25,000 | 1,200,000 |
| Labor (unskilled) | 2 | 20,000 | 480,000 |
| Assembling Labor (skilled) | 3 | 25,000 | 900,000 |
| Total Direct Labor Salary | | | 7,020,000 |
| Total Human Resource Cost | | | 9,480,000 |

| Table 20: I | Human | Resource | Requirement |

13. KEY ASSUMPTIONS

13.1. Operating Cost Assumptions

Table 24: Operating Cost Assumptions

| Description | Details |
|------------------------------------|---------|
| Building rent growth rate | 10% |
| Furniture and fixture depreciation | 15% |
| Vehicle depreciation | 15% |
| Office equipment depreciation | 15% |
| Inflation rate | 8.3% |
| Wage growth rate | 7.3% |
| Electricity price growth rate | 8.8% |
| Office equipment price growth rate | 8.0% |
| Office vehicle price growth rate | 10.7% |

13.2. Revenue Assumptions

Table 25: Revenue Assumptions

| Description | Details |
|------------------------------|---------|
| Sale price growth rate | 8.3% |
| Initial capacity utilization | 60% |
| Capacity growth rate | 10% |
| Maximum capacity utilization | 95% |

13.3. Financial Assumptions

Table 26: Financial Assumptions

| Description | Details |
|----------------------------|---------|
| Project life (Years) | 10 |
| Debt: Equity | 0:100 |
| Discount Rate used for NPV | 20% |

13.4. Cash Flow Assumptions

| Description | Details |
|-------------------------------------|---------|
| Accounts receivable cycle (in days) | 45 |
| Accounts payable cycle (in days) | 30 |
